

CSE 495

Group D1

Matt Seungju Choi

Reflection and Winter goals

1. **REFLECT** - Please respond to the following prompts:

- What is your **team's goal** for the end of the quarter? : Creating a map dashboard which transforms our backend works into the frontend with good UI for our users.
- What were three pieces of advice or **feedback** you would give your team in retrospect? : 1. Try to communicate more, we always need to share our ideas and report the current status of each task and project. 2. Set a schedule for group work, mostly it is better to work(code) together. Teamwork is strongly recommended. 3. Check your teammates' status if they are having a hard time for their task or something like that.
- What do you foresee as **your greatest challenge** for this quarter? What strategies will you take to minimize the risks/barriers presented by this challenge? : My greatest challenge is the lack of technical skill(coding) and background. My strategies to overcome this challenge are teamwork and using office hours as much as I can for help.
- What will be each team member's **roles and responsibilities** for the quarter? How will you work together, but also divide and conquer to maximize impact? : Mostly our tasks will be done through collaborate works. In other words, we are not specifying roles each other, but probably we are going to put more people on Frontend development since we do not have much experience about Frontend.
- Class will mainly be focused on team meetings with the teaching team this quarter. Are there any specific topics your team would like to see covered or resources required? : It would be great if the class is focused on coding instruction with examples that explained step by step

1. **SCHEDULE** – Combine your team's weekly schedule into a spreadsheet or chart.

- How much time will you meet outside of class each week? : Once a week for an hour(Monday)
- Identify and block out your weekly team meeting times on your calendar. : I added on my Google calendar.

1. **DOCUMENTATION** – Remember to document your process – both for your team's sanity and to support future design teams or community projects.

- We will be more prescriptive this quarter in documenting your team's progress. Aside from individual notebooks, we will have git pages for each group to contribute code and ideas.
- How will you share and store key documents? (e.g., Google Drive, etc)
  - D1 Google Drive
